

Reactivation Power — Demo Script

Screen-share walkthrough for sales calls. You drive; the lead watches. 8–10 minutes at a comfortable pace.

PASSWORD

1234!

Includes the exclamation point. Watch for caps lock or a trailing space.

Before you share your screen

1. Open **reactivationpower.com/demo** in a fresh browser tab.
2. Type the password **1234!** and click **Open the demo**.
3. Look at the thin bar across the top of the page. If the data was refreshed earlier than this morning, or the last presenter left things messy, click **Reset demo data** (top right of that bar) and confirm. It takes about 15 seconds.
4. Close any other tabs. Now start screen sharing.

You are logged in as Dr. Daniel Whitaker, owner of Ridgeline Chiropractic & Wellness — a fictional four-niche clinic (Chiropractic, Decompression, Joint Pain, ChiroThin) with 100 patients and four callers. The dates are always current: calls are due “today,” appointments are “next week,” history covers “the last ten weeks.” You never have to explain old dates.

The walkthrough

Work the navigation left to right: Contacts, Training, Dialer, Analytics. Say the line, then click.

1. Contacts — the upload

SAY “This is the patient list. Let me show you how it gets in here.”

CLICK **Upload Contacts**, then **Load sample file**.

SAY “Your office manager exports a spreadsheet from your practice software. The system reads the column headings itself — first name, phone, last visit, which service they came in for. No formatting work on your end.”

POINT TO The grouped preview. “It sorts every patient onto the right script automatically — chiropractic patients get the chiropractic script, decompression patients get decompression.”

POINT TO The red warning. “And watch this — two of these patients are tagged Massage Therapy, which this office doesn’t have turned on. Instead of quietly misfiling them, it flags them. Nobody gets the wrong script.”

CLICK **Upload 24 contacts** , then **Done** . Nothing actually changes — the demo always stays at 100 patients.

2. Training

SAY *“Before anyone picks up a phone, they go through this. Every script, every objection, every screen they’ll see on a live call. You’ll see in a minute why this matters.”*

Scroll once so they see the course structure, then move on. The payoff comes in Analytics.

3. Dialer — the money screen

SAY *“This is what your caller sees every morning.”*

POINT TO The small count at the top. *“Not a hundred names dumped on someone. A handful. Worked, then the next handful appears.”*

POINT TO A **Call morning** / **Call midday** / **Call afternoon** chip. *“If we didn’t reach someone at 10 AM, the system tells the caller to try them at a different time of day. Nobody keeps calling the same dead hour.”*

POINT TO A **1 day overdue** badge, if one is showing. *“Nothing falls through. If a call slips, it’s flagged the next morning.”*

POINT TO **N in reserve** . *“The rest of the list is waiting its turn.”*

CLICK **Start Call** on any patient.

SAY *“Here’s the script. The caller reads it — but the real power is these.”*

POINT TO The objection chips at the bottom. *“The patient says ‘I’m doing fine now’ — tap, and the response is right there. ‘Let me think about it’ — tap. Your caller never has to improvise.”*

CLICK One chip to show the branch. Then use the browser **Back** button to return to the Dialer.

4. Analytics — proof it works

SAY *“Here’s how you know it’s working, without asking anyone.”*

POINT TO The team trend and the appointments-per-month chart.

CLICK **Sarah Mitchell** .

SAY *“Sarah is the caller you want. Sixty-plus calls, a third of the people she reaches book an appointment, training completely finished.”*

POINT TO Scroll to the **Training audit** section and point to 100%.

CLICK Back to Analytics, then **Tyler Brooks** .

SAY *“Tyler has made thirty calls and booked zero. Scroll down...”*

POINT TO Scroll to the **Training audit** . *“Six of eighteen training videos. Barely signs in. This is how you find out in week two, not month three, that a caller skipped the training — and it’s costing you appointments.”*

Pause here. This is the moment. Let it sit for a beat before moving on.

If they ask “what does my caller actually see?”

In the top bar, change **Viewing as** to any caller’s name. The view narrows to just that person’s calls — no team stats, no settings. Switch back to **Dr. Daniel Whitaker** when done.

If something looks wrong during the call

Wrong password error: trailing space or caps lock. The password is **1234!** with the exclamation point.

Numbers look off / someone left junk in the notes: click **Reset demo data** . Say “let me refresh this” — it takes 15 seconds and looks intentional.

Logged out mid-demo: go to **reactivationpower.com/demo** and re-enter the password. The data is untouched.

Anything else: Reset, then reload the page. That fixes almost everything.

Short on time?

Do **Dialer** → **Analytics** only. That is the pitch in four minutes: the caller’s morning screen, one script with the objection chips, then Sarah versus Tyler.

Feel free to click anything during a demo — log a call, add a note, add a caller. It all works. The reset button undoes everything, and the data rebuilds itself automatically every night at 3 AM Eastern.
